Feature	Microsoft Description	How to Disable
Windows Search	Windows Vista search indexing is constantly reviewing files on your system to make their contents available for quick searching.	To disable: Click Start and type services, find Windows Search, double click and stop the service and then change the start type to disabled.
Windows SuperFetch	<p>A new memory management technology in Windows Vista, Windows SuperFetch, helps keep the computer consistently responsive to your programs by making better use of the computer's RAM. Windows SuperFetch prioritizes the programs you are currently using over background tasks and adapts to the way you work by tracking the programs you use most often and preloading these into memory.</p> <p>With SuperFetch, background tasks still run when the computer is idle. However, when the background task is finished, SuperFetch repopulates system memory with the data you were working with before the background task ran. Now, when you return to your desk, your programs will continue to run as efficiently as they did before you left.</p> <p>The marketing sounds great but it really taxes the system.</p>	To disable: Click Start and type services, find SuperFetch, double click and stop the service and then change the start type to disabled.
Automatic Windows Defender Operation	<p>Windows Defender real-time protection against malware continues to run despite having Automatic operation disabled.</p> <p>Replace with any 3rd party tool that you find to be faster and superior.</p>	<p>To disable:</p> <p>Click Start and type services, find Windows Defender, double click and stop the service and then change the start type to disabled.</p> <p>Click Recovery tab and change all to "Take No Action" Apply</p>
Windows Hibernation	This feature saves the contents of RAM to your hard disk in compressed form so you can turn your laptop or desktop computer completely off. When you turn on the power, your documents and applications are open just as you left them so you can start work	<p>To disable</p> <p>1. Type cmd into the Start Search box but *don't* press ENTER</p>
